1 SCREWLESS CONNECTION TECHNOLOGY

- Saves time during mounting
- Screwless plug2power terminals
- Open contact terminals in delivered state
- Quick and easy infeed of the cable
- Closing and opening the contact terminal with the press of a finger
- Simple connection with colour coded clamps
- Maintenance-free and wear-free contacts

2 FAST MOUNTING / REMOVING

Mounting:
insert cable

Close terminal

Removing:
Open terminal using a screwdriver,
pull out the cable

3 SUITABLE FOR ALL CABLE ENDS

- With or without ferrules
- Single wire stripped wires

4 RECORDING OF ALL CABLE CROSS-SECTIONS ACCORDING TO STANDARD

- 16 A: up to 2.5 mm² flexible, up to 4 mm² single wire
- 32 A: up to 6.0 mm² flexible, up to 10 mm² single wire
- For difficult conditions
- High tensile strength
- Shock-proof and vibration-resistant

5 TOOL-LESS ASSEMBLY

- Multi-ramp locking system
- Simple mounting, turning the connection housing locks it in place:
- 1. Put the "OPEN" labels of the top and bottom opposite each other and plug the top onto the bottom
- 2. Turn the top to the right until it locks in place

6 CONNECTING TERMINALS

The tunnel terminals are designed for the following maximum conductor crosssections:

NOMINAL CURRENT	CONDUCTOR CROSS-SECTION
-----------------	-------------------------

A	flexible mm ²	Stiff (single/multiple wire) mm ²
16	4	6
32	6	10
63	16	25
125	50	70

7 LAMELLAR SPRING

- Low insertion and extraction forces
- Minimum contact resistance
- Self-cleaning
- Optimum contact - at least 10 contact points

PLUGS

ACCORDING TO IEC 60309, EN 60309, VDE 0623

turn2fix

PLUG

splash-proof IP44

- screw terminals
- quick release locking system (turn2fix)
- brass contacts

PLUGS AND SOCKETS

according to IEC 60309, EN 60309, VDE 0623

Only roand plug connections in accordance with VDE 0623 are permitted as three-phase plug connections according to VDE 0100-550. Exceptions: domestic installations, sewing halls, laboratories and such (PERILEX is still used in such facilities).

For alternating-current networks on construction sites, roand plug connections according to VDE 0623 in type EN 60309-2 are required in addition to the SCHUKO plug connections for difficult conditions. This is also true for agricultural premises.

At camping sites and boat moorings as well as connections for caravans, roand plug connections acc. to VDE 0623 in type EN 60309-2 are required according to VDE 0100-721. This is also valid for show-type vehicles and caravans.

Roand plug connections in UL versions according to UL 1682/86 are available upon request!

PLUGS AND SOCKETS

according to IEC 60309, EN 60309, VDE 0623

CEE17 Plug connection

The generally used term “CEE17 plug connection” is derived from the standardisation of the CEE Publication 17 from 1966 which is no longer valid.

For this, the requirements for plug connections for industrial purposes are described in the INTERNATIONAL COMMISSION ON RULES FOR THE APPROVAL OF ELECTRICAL EQUIPMENT (short CEE).

Standardisation IEC

Today, “CEE17 plug connections” for industrial use are internationally standardised by IEC 60309-1 and IEC 60309-2. The IEC (International Electronics Commission), located in Geneva, is a standards organisation working worldwide in the areas of electronics and electrotechnology.

Standardisation CENLEC

The European Committee for Electrotechnical Standardisation (short CENLEC) took the standards requirements from IEC 60309 and implemented in European Standard EN 60309 without any changes.

CENLEC is responsible for European standardisation in the area of electrotechnology. Member countries of CENLEC are the national electrotechnology committees of Belgium, Denmark, Germany, Estonia, Finland, France, Greece, Ireland, Iceland, Italy, Latvia, Lithuania, Luxemburg, Malta, Netherlands, Norway, Austria, Poland, Portugal, Romania, Sweden, Switzerland, Slovakia, Slovenia, Spain, Czech Republic, Hungary, the United Kingdom and Cyprus.

RoHS Directive 2002/95/EG

The directive on banning hazardous materials regulates the limitations for putting lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE) in electric and electronic devices on the market.

Our industrial plug connections do not fall under the jurisdiction of the RoHS Directive 2002/95/EG. However, if these were to be installed in devices or their components which fall under the jurisdiction of this directive, they would be in accordance with the restrictions set down in the RoHS directive.

The following devices and components built into devices fall under the jurisdiction of the RoHS: Large home appliances, small home appliances, IT and telecommunication devices, consumer electronics devices, lighting devices, lamps and lights in households, electric transformers built into lighting, switches, motion detectors and ballasts, electric and electronic tools (with the exception of large, anchored, industrial tools), toys as well as sporting and leisure devices, automated vending machines as well as the connection cables and plugs associated with the above.

System for compatibility and distinctiveness

Through the international standardisation of industrial plug connections, the most important measurements, for example, are so designed that plug connections with the same rated currents, rated operational voltage ranges, same number of poles and frequency from different manufacturers are compatible with one another.

In addition, 12 different standardised clock-hour positions for the protective contact, in relation to the non-interchangeable nose on the protective collar, prevent devices with different rated values being connected to each other.

If the label of an industrial plug connection has the number “9” followed by the letter “h” (hour), this gives the position of the protective contact socket if one looks at the front side of a socket or connector and compares it to the face of a clock. For this, the slot in the protective collar must be turned to 6 o’clock.
